Summary

Experienced developer and information/networking specialist with an extensive knowledge of the full stack (server, data modeling, business logic, user experience) and modern web technologies as well as network infrastructure, architecture and security. Cognizant of the role that information plays in a business and in society; able to take a creative, problem solving approach to both programming and information management issues. Dedicated to providing a link between customers and the information resources they need with a strong understanding of information policy, ethics and organization/research methodologies.

Familiar with multiple compiled and interpreted programming languages and a wide array of technologies (databases, memory stores, ORMs, frameworks). I am a competent Linux system administrator and network manager; I maintain a fairly large network of self-hosted services and personal projects across a number of virtual servers complete with backups, heartbeat checks and security/authentication. An excellent communicator and excel at being the bridge between the technical team and clients/stakeholders to break down complex problems and provide solutions. I am bilingual, able to read and write in both English and Spanish. Years of experience and professional training in Agile workflow practices. You may find code samples and hobby projects at my website (linked above).
